

**FOR MARINE AND  
RAIL APPLICATIONS**

## **Product Highlights**

- Operating temperature  
-50°C to +125°C
- Good abrasion  
resistance
- Flame resistant
- Zero halogen
- Self-wrapping design
- Easy to apply and  
remove
- Ideal for reworking  
components without  
disconnecting them
- Lightweight  
construction
- Aesthetic solution

# **Roundit® 2000 FR**

Roundit 2000 FR is a wrap-around sleeving manufactured from flameretardant polyester monofilaments and multifilaments and was designed for mechanical protection and maintenance of wires and cable bundles. Its construction allows for 100% coverage while also providing excellent cut-through and abrasion resistance.

The self-wrapping feature of Roundit 2000 FR enables quick and easy installation and removal of the product for assembly and maintenance. It can be applied or removed without the need to adjust connectors or fittings and offers an innovative solution in areas where breakouts are necessary.

As an additional benefit, Roundit 2000 FR enables users to stock a limited range of sizes to cover a wide range of cable and wire diameters. To ease installation, a special assembly tool has been designed.

Roundit 2000FR has many applications in the rail and marine industries.
