

## Product Highlights

- Continuous long-term heat protection to 540°C
- No end fray
- Suitable for long length applications
- Attractive appearance

# Thermojacket® S

## Sleeving for long-term heat protection

Bentley-Harris® Thermojacket sleeving provides excellent long-term heat protection for hoses, wire harnesses and cables. Thermojacket is available in a variety of grades, offering industrial users the option of selecting combination of properties best suited to their specific application.

Thermojacket S sleeving is constructed of braided fiberglass with a saturated coating which adds rigidity to the product and reduces the likelihood of end fray. The stiff coating also results in a sleeving that is easy to apply over long length applications and is resistant to mechanical abrasion. Thermojacket S withstands exposure to long-term heat to 540°C.
