

## Product Highlights

- Rated to 125°C
- Self-wrapping design
- Easy to apply and remove
- Ideal for reworking components without disconnecting them
- Tough fabric texture
- Aesthetic Solution

## Roundit® 2000 W Protective Cable Wrap

Roundit® 2000 W is manufactured from polyester monofilaments and textured polyester yarn. This combination provides a flat weave construction with a rugged yet smooth texture and appearance. Roundit® 2000 W is ideal where bundling capabilities are needed, but the color white is required to “blend” in with its environment.

Roundit® cable wrap products are tough and lightweight. They are used to bundle and protect cable assemblies, hoses and wire harnesses to reduce chafing, cutting and abrading. The self-wrapping design allows for quick and easy installation and removal for assembly and maintenance. Roundit® products may also be applied or removed without disturbing connectors or fittings.

Roundit® products have applications in the aeronautical, marine, medical, electronic, furniture accessory and general manufacturing industries.
