

## **Federal-Mogul Corporation Receives Quality Awards from Key Customers**

Federal-Mogul Corporation recently received Quality Awards from two key customers in China -- Dongfeng Cummins Engine Co. Ltd. (DCEC) and Shenyang Brilliance Jinbei Automotive Co., Ltd. (Brilliance Auto).

DCEC, a leading heavy-duty engine manufacturer in China, presented Federal-Mogul's operation in Nanchang with a Best Performance in Quality Award. F-M Nanchang was one of only three suppliers to receive this prestigious award, and among 60 suppliers attending DCEC's Annual Supplier Conference held in Sanya City, China. Accepting the DCEC Award on behalf of Federal-Mogul was Liping Xiong, F-M Nanchang plant manager. The facility supplies Cummins with exhaust manifold gaskets, secondard gaskets, edge mold rubber gaskets, cylinder head gaskets, and multi-layer steel gaskets.

Brilliance Auto, a leading manufacturer of automotive components for mini-buses, sedans, SUVs and light trucks, awarded F-M Nanchang with a Quality Excellence Supplier Award at its annual supplier conference in Sanya City, China. Stefan Wu, sales director, accepted the Award on behalf of Federal-Mogul. F-M Nanchang supplies Brilliance Auto with cylinder head gaskets, intake manifold gaskets, exhaust manifold gaskets, oil drain gaskets, exhaust extend pipe gaskets, thermostat gaskets, valve cover gaskets and heat shield assemblies.

Federal-Mogul finished the 2008 calendar year with single digit PPM (parts per million) quality performance. The company has attained a world-class quality position due to high technology manufacturing and well-trained worlders in state-of-the-art facilities.

"The Asian market is an important growth area for Federal-Mogul," said Gerard Chochoy, senior vice president, Powertrain Sealing and Bearings. "Receiving recognition such as this from both DCEC and Brilliance Auto is testimony to our company's commitment to produce high-quality learding products and services in this dynamic region."

The Nanchang facility began production in 1996 as a joint venture and became wholly-owned by Federal-Mogul in 2005. Federal-Mogul supplies pistons, rings, bearings and sealing technologies to both original equipment manufacturers and aftermarket customers in the growing and dynamic Chinese market. Federal-Mogul operates seven sites in China, and is preparing to open its 9,000 square meter, \$20 million state-of-the-art Technical Center and Headquarters in Shanghai in mid-2009.
