

Features and Benefits

- Temperature Rating up to 200°C
- Excellent Abrasion Resistance
- Excellent Flexibility
- Extremely Lightweight
- Attractive Appearance
- Excellent Fluid Resistance

Typical Applications

- Electrical Distribution Systems
- Hoses
- Tubing

Expando® PN

Bentley-Harris® Expando PN is a highly flexible, expandable solution designed to provide excellent abrasion protection in extreme temperature environments. The product is constructed of a dual monofilament, using two different diameters of modified polyester fiber. The larger diameter fibers act as guard strands, providing a high level of abrasion resistance. The smaller diameter fibers help provide the amount of flexibility, expansion, and self-recovery inherent in the braid.

Expando PN expands to several times its original diameter with one size accommodating multiple applications.
